Summary

A post shared in the Boquete Community Group explains that the Municipality of Panama City has launched SismoLive Panamá, a web platform giving real-time information on recorded seismic activity. It can be added to a phone's home screen like an app; it is not an early-warning system.

Full text (English)

Important Information for Our Community!

The Municipality of Panama City has launched a platform that allows users to receive real-time notifications about seismic activity directly on their phones.

The best part is that you can access it through a link and add it to your phone's home screen, allowing you to use it just like an app. The platform is also entirely in Spanish and easy to use. Important clarification: This tool DOES NOT predict earthquakes or function as an early warning system. Its purpose is to provide information about recorded seismic activity in real time, helping us stay informed and respond appropriately.

We live in a seismically active region, so having access to reliable information and staying prepared is essential.

Access the platform here: <https://sismolive.mupa.gob.pa/#mapa>

Please share this information so more people in our community can benefit from this useful tool!
