Summary

IDAAN is carrying out maintenance at the Tolé, San Félix and Dolega water treatment plants in Chiriquí (and Chepo in Panamá Este) as part of works scheduled from 26 October, so water may be unavailable in nearby sectors.

Details (summary of the article)

El Siglo reports that Panama's national water utility IDAAN is performing maintenance at the Tolé, San Félix and Dolega potable water plants in Chiriquí province, as well as the Chepo plant in Panamá Este. The works form part of a maintenance schedule beginning 26 October. During the works, supply may be interrupted or pressure reduced in sectors served by these plants; Dolega is the nearest to Boquete and serves areas on the David-Boquete corridor. Residents are advised to store water in advance. Service is expected to normalize gradually once the works finish. Full area lists are given in IDAAN's own notices.
